Personal Profile

I am MSc Data Analytics candidate from University of Huddersfield and possess a computer science degree. Over four years I have done self-analysis of different financial markets like crypto, forex, futures, and options. I designed a CO2 emissions prediction model obtaining over 138000 UK housing records with a R^2 of 0.81. The model was developed using four machine learning models with the help of cross-validation and hyperparameter tuning. I am looking for the Position of Data Analyst in Fintech to develop actionable insights, interactive dashboards and facilitate decision-making based on data.

Education

2026 AI-Powered Data Analytics Course CodeWithHarry

Covering Python, SQL, Power BI, Tableau, Excel, and AI-powered analytics tools.

2025-2026 University of Huddersfield MSc Data Analytics

Studies including:

Developed a machine learning pipeline for my MSc dissertation to predict CO2 emissions across 138,000+ residential properties in the UK. This involved training four models Linear Regression, Random Forest, Gradient Boosting, and XGBoost with the end model achieving an R^2 of 0.81 via GridSearchCV and 5-fold cross-validation on the last model XGBoost.

Core modules: Machine Learning, Statistical Analysis, Big Data Analysis, Predictive Modelling, Python for Data Science.

2019-2023 UMT, Pakistan BS Computer Science

Final Year Project: Bid Bazar a full-stack auction portal acquired by the academic supervisor.

Relevant Experience

Jul 2021- Present Financial Market Analyst (Self Directed)

- Over a four-year span, I carried out both fundamental and technical analysis in four different asset classes, namely crypto, forex, futures, options. I helped track the movement of price action, volume, and macroeconomic indicators.
- Created and rigorously tested ten algorithmic trading strategies based on chart patterns and candlestick analysis.
- Through the analysis of macroeconomic indicators, the like global event, interest rates, CPI, employment data, I was able to identify trends, track KPIs, and size positions.
- The disciplined risk management, enhancing risk-reward ratio and drawdowns.

Additional Experience

Jul 2023 - Apr 2025

Web Developer, Akvon IT Solutions, Pakistan

- Maintained and developed web applications using React.js, Laravel PHP, and MySQL as part of a cross-functional team of 3+ developers.
- I designed and built an authentication module to secure over 100 users' accounts using session management and role-based access.
- I optimized over twenty relational database schemas and refactored queries for efficiency.
- Developed over seven RESTful APIs and data pipelines enhancing the data transfer speed by 30%.

Skills

Data & Analytics

- I have a good skills set in Python, SQL, MySQL, SQL, Pandas, NumPy, Scikit-learn and Plotly from the coursework and dissertation project during MSc where I cleaned 138000 records, performed feature engineering and model evaluation.
- Proficient in Power BI, Tableau, and Excel to create interactive dashboards and visualizations.
- Reviewed historical data to determine root causes of performance gaps and recommend evidence-based solutions.

Data Management

- I developed a relational database system with 10+ tables, ensured data integrity and designed ETL pipelines for scalable data integration at Akvon IT Solutions.
- For my MSc dissertation, I used the IQR method to remove outliers and cleaned 138,000+ EPC records with missing values and different encoding. I accomplished all this successfully and before the deadline set by my institution.

Machine Learning

- I trained and assessed four different machine learning models using GridSearchCV I also conducted feature engineering, including ordinal, frequency, and one-hot encoding.

Communication

- Created documentation and visualizations directed to the stakeholders for the MSc dissertation.

Leadership & Activities

- While working at Akvon IT Solutions, I oversaw the database design decisions and API architecture of the client-facing web application which is used by users in Australia.
- My responsibilities included the planning, milestones and final presentation of project Bid Bazar (BSc final year project). My academic advisor subsequently acquired the project.
- I alone built and maintained a structure to analyze the financial markets for over 4 years, which acted as an excellent school of discipline and self-improvement.
