Personal Profile

MSc Data Analytics candidate at the University of Huddersfield with a BS Computer Science foundation and 4+ years of self-directed financial market analysis spanning crypto, forex, futures, and options. Designed a CO2 emissions prediction model processing 138,000+ UK housing records, achieving an R^2 of 0.81 through cross-validation and hyperparameter tuning across four ML models. Seeking a Data Analyst role in fintech to deliver actionable insights, interactive dashboards, and data-driven decision-making.

Education

May 2025 - May 2026 University of Huddersfield MSc Data Analytics

Studies including:

For my dissertation, built an end-to-end ML pipeline to predict CO2 emissions in 138,000+ residential properties. I trained Linear Regression, Random Forest, Gradient Boosting, and XGBoost algorithms achieving R^2 of 0.81 via GridSearchCV and 5-fold cross-validation.

Core modules: Machine Learning, Statistical Analysis, Big Data Analysis, Predictive Modelling, Python for Data Science.

Nov 2025 - April 2026 AI-Powered Data Analytics Course CodeWithHarry

Covering Python, SQL, Power BI, Tableau, Excel, and AI-powered analytics tools.

2019-2023 UMT, Pakistan BS Computer Science

Final Year Project: Bid Bazar a full-stack auction portal acquired by the academic supervisor.

Relevant Experience

Jul 2021- Present Financial Market Analyst (Self Directed)

- Conducted fundamental and technical analysis of four asset classes including crypto, forex, futures, options by tracking price action, volume action, and macro across 4 years.
- Developed a back-tested algorithmic trading strategy based on a chart pattern and candlestick analysis over a 5-year period. Entry/ exit criteria have been refined through back testing.
- Reviewed interest rates, CPI, employment data, etc. for trends, KPIs to optimise position sizing across multiple macro-economic scenarios.
- Used disciplined risk-management frameworks to enhance risk-reward ratios and reduce drawdowns.

Additional Experience

Jul 2023 - Apr 2025 Web Developer, Akvon IT Solutions, Pakistan

- With the help of provider APIs, in a cross-functional team of 3+ developers, I maintained and improved web applications in React.js, Laravel PHP, and MySQL.
- Developed and integrated an authentication mechanism. Moreover, secured 100+ user accounts through session management and role-based privileges.
- Optimized the schema of 20+ relational databases and refactored the queries.
- Developed a set of over 7 RESTful APIs and data pipelines which enhanced data transfer speed by 30%.

Skills

Programming

- Python, SQL, MySQL, R, Git, Jupyter Notebook.

Data Analysis

- Pandas, NumPy, Scikit-learn, Plotly, Matplotlib, Feature Engineering.

Visualization & BI

- Power BI, Tableau, Excel (Advanced), Interactive Dashboards.

Machine Learning

- Regression, Random Forest, Gradient Boosting, XGBoost, GridSearchCV, Cross-Validation.

Data Management

- ETL Pipelines, Data Cleaning, Outlier Removal (IQR), Database Design (10+ tables).

Web Development

- React.js, Laravel PHP, RESTful APIs, Inertia.js.

Financial Analysis

- Technical & Fundamental Analysis, Algorithmic Strategy Back-testing, Risk Management.

Statistical Methods

- Hypothesis Testing, Predictive Modelling, Root-Cause Analysis.

Communication

- Stakeholder Reporting, Data-Driven Documentation, Presentation of Insights.

Leadership

- Project Planning, Milestone Tracking, Cross-Functional Collaboration.

Activities

- Database design decisions and API architecture of a client-facing web application targeting end users in Australia were steered at Akvon IT Solutions.
- Spearheaded the planning, milestone tracking and overall presentation of the BSc capstone project Bid Bazar whose ownership was later transferred to the supervisor.
- Disciplined and self-directed individual with 4+ years of building an independent framework for financial market analysis and improvement.
